Preventative Maintenance Strategies: The Key to Proactive Operations

The shift from reactive (repairing after a breakdown) to proactive maintenance is a cornerstone of efficient operations. Preventative maintenance (PM) strategies are designed to identify and address potential issues before they escalate into costly failures.

Types of Preventative Maintenance:

1. **Time-Based Maintenance:** Performed at predetermined intervals (daily, weekly, monthly, annually). For example, lubricating a machine every month.
2. **Usage-Based Maintenance:** Triggered by the amount of use, such as hours of operation, cycles, or mileage. For example, changing the oil in a vehicle after a certain number of hours.
3. **Condition-Based Maintenance (CBM):** Utilizes sensors and monitoring systems to assess the actual condition of

equipment. Maintenance is performed only when indicators suggest it's needed. This is often the most efficient form of PM. Examples include vibration analysis, thermal imaging, and oil analysis.

4. **Predictive Maintenance (PdM):** A subset of CBM that uses advanced analytics and machine learning to predict when equipment is likely to fail, allowing for planned interventions.

Implementing an Effective PM Program:

1. **Develop a Comprehensive Asset List:** Identify all critical equipment and systems requiring maintenance.
2. **Create Detailed PM Checklists:** Outline specific tasks, frequencies, and required tools for each piece of equipment.
3. **Schedule and Track PM Activities:** Utilize CMMS software to schedule tasks, assign responsibilities, and track completion.
