Understanding the Matrix Socolor Color Chart: The Basics

The Matrix Socolor color chart is your visual guide. Think of it as a painter's palette, but for hair. It displays the available shades, organized in a way that makes it easier to understand their underlying tones and depth. Each shade on the chart has a unique number and letter combination. This code is crucial for deciphering the color's characteristics. Let's break down what these codes mean:

Decoding the Color Codes: Numbers and Letters Explained

Every shade in the Matrix Socolor line follows a systematic naming convention. Understanding this system is the first step to mastering the color chart.

The Numbers: Levels of Lightness and Darkness

The first digit in a Matrix Socolor shade code represents the **level** or the lightness or darkness of the color. These levels range from 1 to 10:

1. **1:** The darkest black. Think of deep, rich ebony.
2. **2:** Very dark brown.
3. **3:** Dark brown.
4. **4:** Medium brown.
5. **5:** Light brown.
6. **6:** Dark blonde.
7. **7:** Medium blonde.
8. **8:** Light blonde.
9. **9:** Very light blonde.

10. **10:** The lightest blonde, often referred to as pale blonde or platinum blonde.

The higher the number, the lighter the shade. This is a fundamental concept in hair coloring, and Socolar adheres to this standard, making it easier to transition between different color lines if needed.

The Letters: Tone and Reflects

The second digit (and sometimes a third) in the Matrix Socolar code indicates the **tone** or the **reflect** of the color. This is where the nuance comes in. Tones are the subtle hues that add dimension and personality to the base color. Here are some common letters and their corresponding tones:

1. **N (Natural/Neutral):** This indicates a true, natural tone without any dominant reflect. It's often used for gray coverage or as a base to neutralize unwanted tones.
2. **C (Cool):** Cool tones include ash, beige, and sometimes violet. These tones help to counteract warmth and are excellent for achieving icy blondes or rich, cool brunettes.
3. **W (Warm):** Warm tones are typically gold, copper, and red. These add warmth, radiance, and vibrancy to the hair.
4. **G (Gold):** A warm, yellow-based reflect.
5. **R (Red):** A vibrant red reflect.
6. **B (Brown/Blue):** Often indicates a brown shade with a subtle blue undertone, creating cooler brown tones.
7. **V (Violet):** Violet tones help to neutralize yellow and create beautiful, cool blondes or rich, violet-based brunettes.
8. **M (Mahogany):** A reddish-brown tone, offering a sophisticated, deep red hue.
9. **K (Copper):** A vibrant, warm copper tone.

10. **A (Ash):** These are cool, green or blue-based tones that effectively neutralize unwanted yellow or orange undertones in the hair.
11. **I (Iridescent):** Often found in lighter shades, these tones add a subtle, multi-dimensional shimmer.

Sometimes, you'll see a decimal point followed by another number or letter. This often signifies a secondary reflect, adding even more complexity and depth to the shade. For example, a 744 might indicate a medium blonde with a strong copper reflect.

Specialty Shades and Correctors

Beyond the main shade families, the Matrix Socolor color chart also includes specialty shades and correctors. These are often used by professionals to fine-tune color results or to achieve specific effects. For example, you might find clear shades for diluting or adding shine, or intense toners to combat brassiness.

How to Use the Matrix Socolor Color Chart Effectively

The Matrix Socolor color chart is more than just a pretty picture; it's a powerful tool. Here's how to make the most of it:

Consultation is Key

The absolute best way to use the Matrix Socolor color chart is in consultation with a professional colorist. They have the expertise to:

1. Assess your current hair color, including any underlying pigments.
2. Understand your desired outcome and how it translates to the chart.
3. Consider your skin tone and eye color to recommend the most flattering shades.
4. Determine the correct developer and processing time for optimal results.
5. Explain the potential for lifting, depositing, and toning based on your hair's condition.

Understanding Underlying Pigments

Hair color is a science, and understanding underlying pigments is crucial. When you lift (lighten) natural hair color, underlying pigments are revealed. For example, darker hair might reveal red, then orange, then yellow undertones as it gets lighter. The Matrix Socolor color chart, with its tone indicators, helps you anticipate and neutralize these pigments. An ash tone (A) is used to combat yellow and orange, for instance. A colorist will use the chart to select a shade that not only provides the desired color but also neutralizes any unwanted undertones.

The Role of Developers

The Matrix Socolor color chart shows the shades, but the final result also depends heavily on the developer used. Developers (like Matrix's Cream Developers) come in different volumes (e.g., 10, 20, 30, 40). The volume of the developer determines how much the hair is lifted and how intensely the color is deposited. A professional will choose the developer based on your starting hair color, desired lightness, and hair health.

Gray Coverage Considerations

Matrix Socolor is renowned for its gray coverage capabilities. When selecting a shade for gray hair, a colorist will often look for shades with a strong 'N' (Natural) base, or a blend of natural and tone reflects. Sometimes, mixing a natural shade with a vibrant tone is necessary to achieve both complete coverage and a beautiful, multidimensional result on resistant gray hair.

Beyond the Chart: The Art of Socolor

While the Matrix Socolor color chart provides a roadmap, the true beauty of Socolor lies in its artistry. Professional colorists use this chart as a starting point, combining shades, adjusting formulas, and employing various techniques to create bespoke colors. Whether it's a subtle balayage, a rich all-over color, or a dramatic fashion shade, the Socolor system empowers them to achieve stunning, personalized results. The chart helps them understand the interactions between different pigments and how they will appear on various hair types.

Where to Find the Matrix Socolor Color Chart

The most accurate and up-to-date Matrix Socolor color chart is typically available at professional beauty supply stores. If you're a salon professional, you'll have direct access. The Foundation of Color: Understanding Matrix SOCOLOR's Technology

Before delving into the chart itself, it's crucial to understand what makes Matrix SOCOLOR a go-to choice. SOCOLOR is a permanent hair color system formulated with Cera-Oil Conditioning Complex, a proprietary blend of ceramides, natural oils, and conditioning polymers. This advanced technology works to strengthen and replenish hair from within, ensuring vibrant, even color deposit while improving hair's overall health and shine. Decoding the Matrix SOCOLOR Color Chart: A Visual Language

The Matrix SOCOLOR color chart is not just a collection of swatches; it's a carefully organized system designed to simplify the complex science and art of hair coloring. Each shade is represented by a number and letter combination, which, once understood, becomes a clear language for colorists. Let's break down this system:

The Number: Understanding the Level System

The first digit in a SOCOLOR shade designation refers to the **level** of the color. This indicates how light or dark the natural pigment is, ranging from the darkest blacks to the lightest blondes.

1. **1**: Deepest Black
2. **2**: Very Darkest Brown
3. **3**: Darkest Brown
4. **4**: Medium Brown
5. **5**: Light Brown
6. **6**: Dark Blonde
7. **7**: Medium Blonde
8. **8**: Light Blonde
9. **9**: Very Light Blonde
10. **10**: Lightest Blonde

Understanding the level system is fundamental. A level 7, for instance, will always be a medium blonde, regardless of its underlying tone. This provides a consistent baseline for colorists to build upon, ensuring predictability and control over the final result.

The Letter: Exploring the Tone and Reflects

The letters following the number indicate the **tone** or **reflect** of the color. This is where the true artistry and nuance of SOCOLOR come into play. Tones are the subtle undertones that give a color its specific character. For example, a level 7 can be a natural blonde, a golden blonde, a ash blonde, or a beige blonde, each with a distinct visual impact. The Matrix SOCOLOR color chart meticulously categorizes these tones:

1. **N** (Natural): True to natural pigment, often used for maximum gray coverage or as a base.
2. **C** (Cool): Ash, neutral, or muted tones. Think of cool browns, icy blondes, and subtle mauves. These tones are excellent for cancelling out unwanted warmth.
3. **W** (Warm): Golden, copper, red, or beige tones. These shades add vibrancy and richness.
4. **V** (Violet): Purple undertones, often used to create rich auburns or cool out brassiness in blonde hair.
5. **R** (Red): True reds and vibrant copper tones.
6. **G** (Gold): Warm, sun-kissed golden tones.
7. **B** (Beige): Muted, sandy tones that offer a natural, lived-in look.
8. **A** (Ash): Greenish-blue undertones, ideal for neutralizing unwanted yellow or orange tones in lighter hair.
9. **M** (Mahogany): Reddish-brown tones.
10. **K** (Copper): True copper shades.
11. **I** (Iridescent): Often a combination of tones, creating a complex, multi-dimensional effect.

It's important to note that some shades might have double letters (e.g., 77G). This often signifies a more intense or deeper tone. For example, 77G would be a medium blonde with a very strong golden reflect.

Navigating the SOCOLOR Shade Families

The Matrix SOCOLOR color chart is further organized into distinct shade families, making it easier to locate specific types of colors. These families often reflect natural hair colors and popular fashion shades.

1. Natural Family (N): The Foundation of Coverage

The Natural family is crucial for achieving excellent gray coverage. These shades are designed to mimic natural hair pigmentation and provide a solid base for other color applications. When gray coverage is the primary concern, a colorist will often lean on shades from this family, sometimes with the addition of a slightly warmer or cooler reflect to achieve the desired final tone.

2. Cool Tones (C, A, V): Taming Warmth

For those seeking to neutralize brassiness or achieve sophisticated, muted looks, the Cool Tones section of the chart is invaluable. Ash (A) shades are your primary tool for combating yellow, while cool brown (C) and violet (V) shades can offer subtle sophistication or counteract orange undertones. Understanding the underlying pigment of the hair is key to effectively using these cool tones.

3. Warm Tones (W, G, K, R): Adding Vibrancy and Dimension

The Warm Tones family offers a spectrum of rich, vibrant colors. From sun-kissed gold (G) and fiery copper (K, R) to warm beiges (B), these shades are perfect for adding dimension and a healthy glow. The intensity of warmth can vary, allowing for subtle enhancements or bold, statement colors.

4. Red & Mahogany Tones (R, M, V): Bold and Beautiful

For those who dare to go red, the SOCOLOR chart provides a comprehensive array of red and mahogany shades. These can range from subtle auburns to vibrant coppers and deep, luxurious burgundies. The interplay of red and violet (V) can create some of the most captivating and complex red hues.

5. Blondes: From Subtle to Striking

The blonde spectrum is perhaps the most diverse and sought-after. The SOCOLOR chart offers an impressive range of blonde levels and tones, from natural and beige blondes to cool ash blondes and vibrant golden blondes. Achieving the perfect blonde often involves understanding the hair's lift and undertones, and the SOCOLOR chart provides the tools to meticulously achieve desired results.

Beyond the Chart: Practical Application and Consultation

While the Matrix SOCOLOR color chart is an indispensable tool, it's just one piece of the puzzle. Effective color application requires a thorough understanding of several critical factors:

Client Consultation: The Cornerstone of Success

The initial consultation is paramount. A skilled colorist will:

1. **Assess Natural Hair Color and Texture:** Understanding the client's natural level, porosity, and texture is crucial for predicting how the

color will take.

2. **Identify Desired Outcome:** Listening attentively to the client's goals and showing them examples from the [Matrix SOCOLOR color chart](#) or inspiration images is vital.
3. **Discuss Lifestyle and Maintenance:** Some colors require more upkeep than others. It's important to set realistic expectations regarding maintenance and salon visits.
4. **Consider Skin Tone and Eye Color:** The most flattering hair color will complement the client's natural features.

Understanding Underlying Pigment and Lift

As hair is lightened (lifted), underlying pigment becomes exposed. This is a fundamental concept in hair coloring. For example:

1. Levels 8-10 will reveal yellow undertones.
2. Levels 6-7 will reveal orange undertones.
3. Levels 4-5 will reveal red undertones.

The Matrix SOCOLOR color chart's tones are designed to counteract or enhance these underlying pigments. For instance, to achieve a level 9 Ash Blonde (9A), a colorist would typically lift the hair to a very pale yellow (level 9 or 10) and then apply the 9A to neutralize the yellow tones.

Formulation and Mixing: The Art of Precision

Once the desired level and tone are identified on the Matrix SOCOLOR color chart, the colorist will formulate the perfect mixture. This often involves:

1. **Choosing the Correct SOCOLOR Shade:** Based on the consultation and assessment.

2. **Selecting the Appropriate Matrix Developer:** Developers (e.g., 10, 20, 30, 40 volume) determine the degree of lift and the speed of the chemical reaction.
3. **Understanding Base Colors and Tones:** Sometimes, a specific SOCOLOR shade needs to be blended with a natural base or another tone to achieve the exact desired result.

The Role of SOCOLOR Blended Tones and Specialty Lines

Matrix continuously innovates, and the SOCOLOR line is no exception. Keep an eye out for specialty lines and blended tones that offer even more creative possibilities. These might include ultra-pale blondes, vibrant fashion colors, or shades specifically designed for advanced techniques like balayage or ombre.

Troubleshooting Common Color Challenges

Even with the best tools, hair coloring can present challenges. The [Matrix SOCOLOR color chart](#), coupled with experience, helps in overcoming them:

1. **Unwanted Brassiness:** Often corrected with ash or violet-toned SOCOLOR shades applied at the appropriate level.
2. **Uneven Color Deposit:** Can occur with porous or damaged hair. Proper porosity equalizers and careful application are key.
