Exploring the Mitchell's Building Series in Everett: A Deep Dive into Enduring Finishes

Everett, Washington – a city known for its rich maritime history and its position as a hub for aerospace innovation. But beyond the towering cranes and the scent of Puget Sound, Everett also boasts a distinctive architectural landscape. Among its many structures, the Mitchell's Building Series stands out, not just for its historical significance but

also for the enduring quality of its finishes. For those who appreciate craftsmanship and timeless design, understanding the finishes used in these buildings offers a fascinating glimpse into a bygone era of construction and an inspiration for modern renovations. The Mitchell's Building Series, while not a single monolithic entity, refers to a collection of properties developed or influenced by the Mitchell family, a prominent name in Everett's early development. These buildings, often found in the downtown core, represent a period where durability, aesthetics, and a sense of permanence were paramount. The finishes employed are a testament to this philosophy, showcasing materials and techniques that have weathered the decades with remarkable grace. This article will delve into the various finishes that define the Mitchell's Building Series, offering insights for homeowners, developers, and anyone interested in the architectural heritage of Everett.

Understanding the Architectural Context of Mitchell's Buildings

Before we dive into the specifics of finishes, it's crucial to understand the architectural styles prevalent during the periods when the Mitchell's Building Series were likely constructed or significantly renovated. Many of these buildings likely fall into the categories of Victorian, Edwardian, or early 20th-century commercial architecture. These styles often emphasized ornate detailing, solid construction, and the use of natural materials. * **Victorian Era (Late 19th Century - Early 20th Century):** Characterized by a mix of styles, often featuring asymmetrical facades, steep roofs, and decorative elements like gingerbread trim. Finishes tended to be rich and varied, reflecting a desire for grandeur. * **Edwardian Era (Early 20th Century):** A

slightly more restrained style, often favoring cleaner lines and a sense of order. However, quality materials and detailed craftsmanship remained important. * **Early Commercial Architecture:** Buildings designed for businesses often prioritized functionality but still incorporated elements of prevailing aesthetic trends. Durability and a professional appearance were key considerations. The Mitchell's Building Series likely embodies a combination of these influences, with their finishes reflecting the best available materials and techniques of their time.

Exterior Finishes: Standing the Test of Time

The exteriors of the Mitchell's Building Series are often the first introduction to their character. The finishes here are not just about looks; they are about protection against the elements and a statement of the building's presence in the urban fabric of Everett.

Brickwork: The Foundation of Durability

One of the most ubiquitous and enduring exterior finishes found in the Mitchell's Building Series is high-quality brickwork. Often laid with precision and care, these bricks have a natural resilience that has allowed them to withstand decades of Pacific Northwest weather. * **Types of Brick:** You'll commonly find solid clay bricks, often in a range of earthy tones from deep reds and browns to softer buffs and oranges. The texture can vary, from smooth faced bricks to those with a more rustic, handmade appearance. * **Mortar Joints:** The mortar used plays a crucial role in both the structural integrity and the aesthetic appeal of brickwork. In older buildings like those in the Mitchell's series, you might see lime-based mortar, which is more

flexible and breathable than modern Portland cement. The color of the mortar, often a contrasting white or a muted grey, also significantly impacts the overall look. * **Decorative Brickwork:** Beyond simple structural applications, many Mitchell's buildings showcase decorative brickwork. This can include corbelling (bricks projecting outwards in steps), soldier courses (bricks laid vertically), and intricate patterns or banding that add visual interest and highlight architectural features. The longevity of brick is undeniable. Its resistance to fire, rot, and insect damage makes it an ideal material for enduring structures. The weathering of brick, with its subtle color variations and patina, adds a unique character that new materials struggle to replicate.

Stone Accents: Elevating the Aesthetic

While brick is prevalent, many buildings within the Mitchell's series also incorporate stone elements to enhance their visual appeal and add a touch of elegance. * **Foundation and Sills:** Natural stone, such as granite or sandstone, is frequently used for building foundations, window sills, and occasionally for entire lower courses of the building. These materials provide excellent protection against moisture and impact. * **Decorative Lintels and Cornices:** Stone can also be found in more decorative applications, such as carved lintels above windows and doors, or as part of elaborate cornices that crown the building. These details speak to the craftsmanship of the era. * **Durability and Weathering:** Like brick, natural stone is incredibly durable. Its ability to withstand weathering and develop a rich patina over time is highly valued in historic preservation.

Stucco and Plaster: A Smooth Finish with Character

In some instances, particularly in later constructions or for specific

architectural styles, stucco or plaster finishes might be present. *

****Lime-Based Stucco:**** Early stucco often used a lime-based aggregate, which allowed for breathability and a certain degree of flexibility. This could be applied over brick or other structural elements. *

****Textured Finishes:**** Stucco can be applied with various textures, from smooth, troweled finishes to more heavily textured, trowel-marked surfaces that add depth and visual interest. *

****Painting and Color:**** Stucco finishes were often painted in a range of colors, reflecting the prevailing palettes of their time. The adherence of paint to older stucco can sometimes be a challenge, but when done correctly, it can beautifully accentuate architectural details.

Metalwork: The Finishing Touches

The detailed metalwork on older buildings often contributes significantly to their overall finish and character. *

****Cast Iron:**** Intricate cast iron elements, such as decorative balconies, railings, and facade ornamentation, were popular in the late 19th and early 20th centuries. These pieces were often custom-designed and add a sophisticated touch. *

****Sheet Metal:**** Copper and galvanized steel were commonly used for roofing details, gutters, downspouts, and decorative finials. Over time, copper develops a beautiful green patina, while galvanized steel can age to a weathered grey. *

****Wrought Iron:**** While less common than cast iron for extensive decorative elements, wrought iron was often used for functional elements like security bars and simpler railings.

Interior Finishes: Craftsmanship Within

Step inside a Mitchell's Building Series property, and you'll often find a

wealth of well-preserved interior finishes that speak volumes about the quality of construction and the desire for a refined living or working space.

Woodwork: The Heart of Timeless Interiors

The use of solid, high-quality wood is a hallmark of many older buildings, and the Mitchell's series is no exception. * **Hardwood Floors:** Polished hardwood floors, typically oak, maple, or Douglas fir, are a common and highly prized feature. These floors were often laid in intricate patterns like herringbone or straight planks and have been sanded and refinished over the years, revealing their natural beauty. The depth of the grain and the warm tones of aged hardwood are unparalleled. * **Trim and Moldings:** Elaborate baseboards, crown moldings, window casings, and door frames made from solid wood are frequently found. These architectural details, often featuring classical profiles or more ornate Victorian designs, add a sense of grandeur and define the character of each room. The craftsmanship involved in their installation is evident in the tight joints and precise miters. * **Wainscoting:** In some rooms, particularly dining rooms or entryways, you might encounter beautifully crafted wooden wainscoting, adding texture, warmth, and a touch of elegance to the lower walls. * **Built-in Cabinetry and Furniture:** Many older homes and some commercial spaces featured custom-built cabinetry, bookshelves, and even furniture integrated into the architecture. These pieces, often made from the same quality wood as the trim, are both functional and aesthetically pleasing.

Plaster Walls and Ceilings: A Smooth Canvas

While drywall is common today, older buildings often featured plastered walls and ceilings, offering a different quality and durability.

* **Plaster Over Lath:** Walls were typically constructed with plaster applied over wooden lath. This method creates a strong, seamless surface that is exceptionally durable and resistant to cracking compared to early forms of drywall. * **Decorative Plasterwork:** In some of the more prominent rooms or buildings, you might find decorative plasterwork on ceilings, such as ornate cornices, medallions around light fixtures, or even elaborate molded designs. These are often intricate and add a luxurious feel. * **Painting:** Plaster walls were traditionally painted, and the smooth finish of plaster provides an excellent base for paint, allowing for a deep, rich color saturation.

Tilework: Practical Beauty

Where durability and hygiene are important, tilework was a popular choice, and its enduring quality is evident in many of these buildings. * **Ceramic and Porcelain Tiles:** You'll often find ceramic or porcelain tiles used in bathrooms, kitchens, and sometimes in entryways or hallways. These tiles, in various colors and patterns, offer a practical and attractive finish. * **Mosaic Tiles:** In some of the more high-end finishes, you might encounter beautiful mosaic tile work, adding intricate detail and a touch of artistry. * **Grout Lines:** The grout used in older tile installations can vary in color and width, contributing to the overall aesthetic. Careful cleaning and sealing can help preserve these historic grout lines.

Hardware and Fixtures: The Unsung Heroes

The details of hardware and fixtures are often overlooked but play a vital role in the overall finish of a building. * **Door Knobs and Plates:** Solid brass, porcelain, or ornate iron door knobs and escutcheon plates are common. These are not only functional but also

tactile and visually appealing. * **Light Fixtures:** Original or period-appropriate light fixtures, such as pendant lights, wall sconces, and ceiling lamps, contribute significantly to the ambiance and the authentic feel of these spaces. * **Plumbing Fixtures:** While many original plumbing fixtures may have been updated, some older homes might retain vintage clawfoot tubs, porcelain sinks, or cast-iron radiators, each contributing to the historic character.

Preservation and Modernization: Balancing Heritage with Contemporary Needs

For current owners and developers of properties within the Mitchell's Building Series, the question of preserving these beautiful finishes while adapting to modern needs is a key consideration. *

Restoration vs. Renovation: Understanding the difference between restoration (bringing a building back to its original state) and renovation (updating and improving a building) is crucial. Many projects aim for a thoughtful renovation that respects and enhances the original finishes. * **Material Sourcing:** When repairs or replacements are necessary, sourcing authentic or high-quality replica materials is essential to maintaining the integrity of the original design. This can involve working with specialty suppliers or salvage yards. * **Integrating Modern Amenities:** The challenge lies in seamlessly integrating modern conveniences like updated electrical systems, plumbing, and HVAC without compromising the historic finishes. Careful planning and skilled craftsmanship are key. For example, running new wiring might require discreet routing through existing chases or careful patching of plaster. * **Respecting the Patina:** The natural aging and patina of materials – the mellowing of wood, the slight imperfections in brick, the subtle color variations in

stone – are often part of a building's charm. Modernization efforts should aim to preserve this character rather than erasing it in favor of a sterile, brand-new look.

A Finishes Mitchells Building Series Everett PDF ensures that text alignment, fonts, images, colors, charts, and layouts remain exactly as intended by the creator.

This makes the Finishes Mitchells Building Series Everett PDF not just a static document, but a powerful and flexible medium for information distribution. Security features such as password protection, encryption, and permission control further enhance the reliability of PDFs for sensitive or proprietary content.

Why choose a Finishes Mitchells Building Series Everett PDF format?

Simply create your document as usual, then choose “Save as PDF” or “Export to PDF” from the file menu. This method ensures high-quality output with accurate formatting.

2. Print to PDF Feature:

Most modern operating systems, including Windows, macOS, and Linux, offer a built-in “Print to PDF” option. This feature allows you to convert virtually any printable document into a PDF file.
