Navigating the RSMeans Cost Data Website: Key Features and How to Use Them

The RSMeans cost data website is designed for intuitive use, but understanding its key features will maximize your efficiency. While specific functionalities can vary slightly depending on your subscription level and the exact product you're using (e.g., RSMeans Online, specific software integrations), the core principles remain the same.

Searching for Cost Items

The primary function is, of course, searching for cost data. You'll typically find several ways to do this: * **Keyword Search:** Simply type in what you're looking for, such as "concrete foundation," "electrical conduit," "drywall installation," or "excavation." * **CSI MasterFormat® Divisions:** RSMeans data is organized according to the Construction Specifications Institute's (CSI) MasterFormat®, a standardized system for organizing construction information. This allows you to browse by broad categories like "Division 03 - Concrete," "Division 26 - Electrical,"

etc. * **Item Numbers:** If you're familiar with specific RSMeans item numbers from previous use or reference materials, you can often input these directly for quick retrieval. Once you perform a search, you'll typically see a list of relevant cost items. Clicking on an item will usually bring up a detailed breakdown.

Understanding the Cost Breakdown

A typical RSMeans cost item will include: * **Unit of Measure:** (e.g., per square foot, per linear foot, per each, per cubic yard). * **Labor Cost:** Often broken down by trade, including man-hours per unit and the corresponding labor rate. * **Material Cost:** The cost of the materials required per unit. * **Equipment Cost:** If applicable, the cost of using specific equipment. * **Total Unit Cost:** The sum of labor, material, and equipment costs. * **Assumptions and Productivity Rates:** Important details about the productivity and conditions under which the costs were calculated. This is crucial for accurate adjustments.

Leveraging Location and Adjustments

One of the most powerful features is the ability to adjust costs for your specific project location. RSMeans provides cost indexes for various cities and regions. By inputting your project's location, the system can automatically apply these indexes to the national average costs, giving you a more accurate local estimate. You can also often adjust for: * **Productivity:** If your crew is more or less efficient than the standard used in the data, you can make adjustments. * **Overhead and Profit:** While RSMeans provides baseline costs, you'll typically need to add your company's overhead and desired profit margin. * **Inflation/Date:** For longer-term projects or when using older data, adjusting for time is critical.

Creating and Saving Estimates

Many versions of the RSMeans cost data website allow you to build and save estimates directly within the platform. This enables you to: * **Compile a Bid:** Assemble a complete bid by adding various cost items. * **Save Project Estimates:** Store your estimates for future reference or modification. * **Export Data:** Often, you can export your estimate data into formats like Excel or CSV for further analysis or integration with other software.
