Understanding the Interviewer's Mindset

Before we jump into the questions, it's helpful to understand what interviewers are truly looking for in a new graduate nurse. They know you're fresh out of school. They don't expect you to have years of experience. Instead, they're assessing:

- * **Your foundational knowledge:** Do you have a solid grasp of nursing principles and theory?
- * **Your critical thinking skills:** How do you approach a problem? Can you analyze a situation and come up with a plan?
- * **Your learning agility:** Are you open to feedback? Are you eager to learn and grow?

Common Interview Question Categories for New Nurses

Interview questions for new nurses can broadly be categorized into a few key areas. Understanding these categories will help you anticipate and prepare effectively.

1. Foundational Nursing Knowledge and Clinical Scenarios

These questions aim to gauge your understanding of basic nursing principles and how you apply them in hypothetical situations. While you won't be expected to have every answer perfectly memorized, your ability to think through the problem is key.

*** **Describe a time you had to advocate for a patient. What was the situation, and what was the outcome?*****

*** **What they're looking for:*** Your understanding of patient advocacy, communication skills, and problem-solving. Think about situations during clinicals where you noticed something was amiss or a patient's needs weren't being met and how you addressed it.

*** **How to answer:*** Use the STAR method (Situation, Task, Action, Result). For example, "During my med-surg rotation (Situation), I noticed a patient was experiencing significant pain after surgery but was hesitant to ask for more medication (Task). I approached the patient, listened to their concerns, and then spoke with the charge nurse to discuss

alternative pain management options (Action). This led to a revised pain management plan, and the patient reported significant relief (Result)."

*****How would you prioritize care for a patient with multiple needs?*****

What they're looking for: Your understanding of prioritization principles (e.g., ABCs - Airway, Breathing, Circulation; Maslow's Hierarchy of Needs). They want to see your ability to assess and make quick, informed decisions.

How to answer: Discuss your thought process. "I would begin by performing a rapid assessment, prioritizing any life-threatening issues like airway obstruction or severe bleeding first. Then, I would consider other immediate needs such as pain management, vital sign stability, and any acute changes in condition. I'd also assess for any psychosocial needs that are impacting their physical well-being." Mention tools like ESI (Emergency Severity Index) if applicable to the setting.

*****Tell me about a challenging patient you encountered during your clinical rotations. How did you handle it?*****

What they're looking for: Your ability to manage difficult personalities, maintain professionalism, and de-escalate situations.

How to answer: Focus on the patient's behavior, not on labeling them. Describe the situation calmly and objectively. Emphasize how you remained professional and focused on providing safe and compassionate care. "I had a patient who was very anxious and resistant to care. I took the time to sit with them, explain each step of the procedure, and answer

their questions patiently. I also tried to identify the root cause of their anxiety, which in this case was a fear of falling. By providing reassurance and ensuring their safety, I was able to build trust and provide the necessary care." *
**"What is your understanding of infection control protocols?"* *
What they're looking for: Your knowledge of basic infection prevention measures. This is a fundamental aspect of nursing. *
How to answer: Discuss hand hygiene as the number one priority. Mention personal protective equipment (PPE), aseptic technique, proper disposal of biohazardous waste, and standard precautions. You can also briefly touch upon transmission-based precautions (contact, droplet, airborne).

2. Behavioral and Situational Questions

These questions explore your past behaviors and how you've handled specific situations. They are designed to predict future performance. Remember to use the STAR method here! *
**"Describe a time you made a mistake. What did you learn from it?"* *
What they're looking for: Honesty, accountability, and a commitment to learning. They want to see that you can admit errors and grow from them. *
How to answer: Choose a minor, non-patient-harming mistake if possible. Focus on the lesson learned and how you've implemented changes to prevent it from happening again. "During a medication administration

practice scenario in school, I misread a dosage calculation. I immediately recognized my error, corrected it, and learned the importance of double-checking calculations and utilizing available resources, such as the drug guide and asking for verification from a peer, before administering any medication."

* ** "How do you handle stress and pressure, especially in a fast-paced environment?" * * What they're looking for: * Your coping mechanisms and resilience. Nursing can be demanding, so they need to know you can manage. * * How to answer: * Talk about healthy coping strategies. "I find that staying organized, prioritizing tasks, and taking short breaks to refocus are very effective for me. I also believe in the importance of debriefing with colleagues after a particularly challenging shift. In school, I managed my academic and clinical workload by using a planner and breaking down large tasks into smaller, manageable steps."

* ** "Tell me about a time you had a conflict with a colleague or instructor. How did you resolve it?" * * What they're looking for: * Your ability to navigate interpersonal challenges professionally and constructively. * * How to answer: * Again, use the STAR method. Focus on your approach to resolving the conflict, emphasizing communication and seeking common ground. "During a group project in nursing school, there was a disagreement about how to approach a particular section of our presentation (Situation). We took a break, then agreed to

discuss our different perspectives calmly and respectfully (Action). We listened to each other's ideas, identified the strengths of each approach, and came up with a solution that incorporated the best elements from both our ideas (Result)."

* ** "Describe a time you had to deliver difficult news to a patient or family." * ** * "What they're looking for: * Your communication skills, empathy, and ability to be sensitive in challenging conversations. * * "How to answer: * Focus on your approach to delivering the news with compassion and clarity. "I recall a situation during my pediatric clinicals where a child was not responding to treatment as expected (Situation). I sat down with the parents, in a private space, and explained the situation in clear, understandable terms. I allowed them to ask questions, listened to their concerns, and offered support and resources. My goal was to be honest while also providing comfort and understanding."

3. Questions About Your Motivation and Goals

These questions delve into your reasons for pursuing nursing and your aspirations for the future. * ** "Why did you choose to become a nurse?" * ** * "What they're looking for: * Your passion and genuine interest in the profession. This is your chance to share your "why." * * "How to answer: * Be genuine and heartfelt. Connect your personal values and experiences to nursing. Did a personal experience inspire you? Do you

have a strong desire to help others? "I've always been drawn to careers where I can make a tangible difference in people's lives. Nursing, in particular, offers the unique opportunity to provide direct care, support patients through vulnerable times, and be a part of their healing journey. I'm also fascinated by the intricate workings of the human body and the science behind health and wellness." * **

"Why are you interested in working on this particular unit/specialty?" ***

What they're looking for: Evidence that you've researched the unit and understand its patient population and scope of practice. They want to see that you've chosen them for specific reasons, not just any job. * **

How to answer: Do your homework! Research the hospital's mission, values, and the specific unit. Connect your interests and skills to what you've learned. "I'm particularly drawn to your [e.g., Critical Care Unit] because of my passion for [e.g., acute patient management and rapid assessment]. During my clinical rotations, I found myself most engaged when dealing with complex cases and I admire your unit's reputation for [e.g., evidence-based practice and interdisciplinary collaboration]." * **

"What are your strengths as a new graduate nurse?" ***

What they're looking for: Your self-awareness and ability to identify your positive attributes that will benefit the team. * **

How to answer: Focus on transferable skills and your eagerness to learn. "I would say my strongest attributes are my dedication to patient safety,

my strong organizational skills, and my enthusiasm for learning. I am a highly motivated individual and I am committed to developing my clinical skills under the guidance of experienced nurses." * **"

What are your weaknesses?" * ***

What they're looking for:* Self-awareness and a proactive approach to self-improvement. * *

How to answer:* This is a classic trick question. Choose a genuine weakness, but frame it in a way that shows you're working on it. Avoid clichés like "I'm a perfectionist." "One area I am actively working on is my confidence in certain advanced procedures. While I have a strong theoretical foundation, I know that practical experience is crucial. I am eager to gain hands-on experience and seek out opportunities for further training and mentorship in these areas." * **"

Where do you see yourself in five years?" * ***

What they're looking for:* Your career aspirations and commitment to the profession and to their institution. * *

How to answer:* Show ambition and a desire for growth within nursing. "In five years, I see myself as a competent and confident registered nurse, actively contributing to patient care on this unit. I hope to have gained specialized certifications in [mention a relevant area if you have one in mind] and to be actively mentoring new graduate nurses myself. I am committed to lifelong learning and continuous professional development within this organization."

4. Questions About Your Teamwork and Communication

**** Nursing is a collaborative profession. Interviewers want to ensure you can work effectively with others. ***"How do you handle feedback from supervisors or colleagues?"** * *What they're looking for:* Your receptiveness to constructive criticism and your ability to use it for growth. * *How to answer:* "I welcome feedback as an opportunity for growth. I believe that constructive criticism from experienced professionals is invaluable for developing my skills and improving my practice. I actively listen, ask clarifying questions, and then work to implement the suggestions." * ***"Describe your ideal team environment."** * *What they're looking for:* Your understanding of what makes a healthy and productive team. * *How to answer:* Focus on collaboration, respect, and open communication. Always have questions prepared! * *What they're looking for:* Your engagement, thoughtfulness, and initiative. * *How to answer:* Ask insightful questions that demonstrate you've done your research and are serious about the role. * "What opportunities are available for professional development and continuing education for new graduate nurses on this unit?" * "What does the typical orientation and preceptorship process look like for a new graduate nurse here?" * "How does the unit approach interdisciplinary collaboration with physicians and other healthcare providers?" * "What are the biggest challenges the unit is currently facing, and how is the team working to address them?" * "What are the key performance indicators or patient outcomes that the unit is focused on improving?"**

Mastering the Interview: Essential Questions for New Nurses

Embarking on a nursing career is both an exciting and demanding journey, and the interview process serves as a critical gateway where candidates showcase not only their clinical knowledge but also their professionalism, empathy, and readiness for the challenges ahead. As healthcare institutions increasingly prioritize holistic care and patient-centered outcomes, interviewers seek insights that reflect a candidate's true commitment to the profession.

Understanding the core interview questions helps new nurses prepare thoughtfully, aligning their experiences with the values and expectations of modern nursing practice.

Core Interview Questions That Reveal True Competence

Interviewers often begin with foundational questions designed to uncover a candidate's motivation, resilience, and foundational understanding of nursing. "Why do you want to become a nurse?" remains a cornerstone inquiry, inviting candidates to articulate their personal drivers—whether it's a desire to heal, advocate, or work collaboratively within a team. Equally important are questions about clinical readiness, such as "Describe a time when you had to adapt quickly to a high-pressure situation." These prompts reveal problem-solving abilities, emotional stability, and real-world experience. Behavioral questions like "Tell me about a time you handled a difficult patient or family" dig deeper into communication skills, empathy, and conflict resolution—capabilities essential for safe, effective care.

Assessing Professional Values and Ethical Awareness

Beyond technical skills, nurses are measured by their ethical integrity and alignment with professional standards. Interviewers frequently explore values through questions such as "How do you ensure patient confidentiality while collaborating with interdisciplinary teams?" This probes

awareness of HIPAA regulations, privacy concerns, and the balance between teamwork and individual accountability. Another insightful question is “What does compassion mean to you in the context of nursing?” which invites reflection on empathy, emotional intelligence, and the human connection at the heart of care. These discussions help assess whether candidates embody the compassion and integrity that define exemplary nursing practice.

The Practical Applications of Thoughtful Responses

Candidates who engage deeply with interview questions demonstrate more than memorized answers—they show self-awareness and readiness to grow. For instance, when asked to explain a moment of failure or learning, a well-crafted response reveals humility and a growth mindset—qualities vital in lifelong professional development. Interviewers also evaluate how candidates frame their experiences: those who link past actions to future readiness signal readiness to evolve within dynamic healthcare environments. These insights help hiring teams predict not just competence today, but potential for impact tomorrow.

The Evolving Landscape and Future

Outlook

As healthcare shifts toward value-based care, technology integration, and population health, interview expectations are evolving. Future nurses must demonstrate adaptability to digital tools, data-driven decision-making, and an awareness of emerging public health challenges.

Interviewers increasingly probe how candidates envision contributing to these forward-moving trends—asking, for example, “How would you support a patient transitioning from hospital to home care?” This forward-looking perspective signals a candidate’s ability to anticipate needs and deliver proactive, coordinated care. By preparing for these evolving questions, new nurses position themselves not just as competent professionals, but as visionary contributors ready to shape the future of healthcare.

Conclusion: Preparing with Purpose and Presence

Preparing for a nursing interview is more than memorizing answers—it’s about cultivating confidence, clarity, and authenticity. By understanding the purpose behind each question and aligning responses with real clinical insight and core values, new nurses can present themselves as thoughtful, resilient, and deeply committed professionals. In an era where patient trust and systemic efficiency depend

on skilled nursing care, mastering these conversations is not just beneficial—it's essential. With thoughtful preparation, the interview becomes a powerful opportunity to showcase not only what you know, but who you are as a future nurse ready to make a meaningful difference.

Mastering the Interview: Essential Questions for New Nurses

The transition from nursing student to practicing professional is a significant milestone, and landing that first coveted nursing position often hinges on a successful interview. For new nurses, these conversations are not just about showcasing theoretical knowledge; they're about demonstrating potential, resilience, and a genuine passion for patient care. As a seasoned journalist covering the healthcare landscape, I've observed firsthand the anxieties and uncertainties new graduates face when stepping into this crucial interview process. This comprehensive guide aims to equip you with the knowledge and strategies to confidently answer common interview questions for new nurses, ensuring you stand out from the competition and secure the role you deserve.

Hiring managers understand that new nurses are still developing their clinical skills and may lack extensive

practical experience. Therefore, interview questions are often designed to assess your foundational understanding, your ability to learn and adapt, your problem-solving capabilities, and your alignment with the facility's values and culture. Beyond technical proficiency, they are looking for someone who is eager, coachable, and committed to continuous professional development. Understanding the "why" behind each question can transform a stressful interrogation into a constructive dialogue.

The Foundation: Understanding Your Strengths and Motivations

The interview often begins with questions designed to understand your core motivations and self-perception as a budding nurse. These are your opportunities to articulate why you chose nursing and what you hope to achieve.

"Tell me about yourself."

This isn't an invitation to recount your life story. Instead, it's a prompt to deliver a concise, compelling narrative highlighting your journey into nursing, your key skills, and your career aspirations relevant to the specific role. Think of it as your elevator pitch. Briefly touch upon your educational background, any relevant clinical experiences (even student rotations), and what drew you to this particular specialty or

facility. For instance, "I've always been passionate about [specific area of nursing, e.g., pediatric care] since I first shadowed a nurse in my sophomore year of college. My clinical rotations at [Hospital Name] further solidified this interest, particularly my experience in [specific unit]. I'm excited about the opportunity to begin my career at [Facility Name] because of your commitment to [mention a specific value or program]." This showcases foresight and research.

"Why did you choose nursing as a profession?"

This question delves into your intrinsic motivations. Employers want to see that your passion for caring for others is genuine and deeply rooted. Share personal experiences or influences that inspired you. Was it a family member's illness, a positive interaction with a healthcare professional, or a lifelong desire to make a difference? Be authentic and heartfelt. Connect your passion to the core tenets of nursing, such as compassion, advocacy, and the desire to alleviate suffering.

"Why are you interested in this specific position/unit?"

This is where your research truly shines. Generic answers won't cut it. Demonstrate that you've thoroughly investigated the facility and the role. Mention specific aspects that attract you, such as the unit's patient

population, the advanced technologies used, the unit's reputation for collaborative care, or professional development opportunities. For example, "I'm particularly drawn to your Intensive Care Unit because of its reputation for cutting-edge critical care and the opportunity to learn from experienced critical care nurses. I'm eager to develop my skills in [specific ICU skill, e.g., ventilator management] and believe your mentorship program would be invaluable." This shows you're not just looking for any job, but a meaningful career step.

"What are your greatest strengths as a new nurse?"

Focus on strengths that are highly valued in nursing. Think about skills that complement your clinical knowledge. Examples include strong communication skills, empathy, a positive attitude, eagerness to learn, critical thinking ability, attention to detail, and teamwork. Provide specific examples from your clinical rotations or academic work to illustrate these strengths. Instead of just saying "I'm a good communicator," explain how you effectively communicated with a difficult patient or collaborated with a multidisciplinary team. Highlighting your adaptability is also a crucial trait.

"What are your greatest weaknesses?"

This is a classic interview question designed to assess self-

awareness and your ability to grow. Avoid clichés like "I'm a perfectionist." Instead, choose a genuine weakness that you are actively working to improve. Frame it positively by explaining what you are doing to overcome it. For instance, "As a new graduate, I'm still building my confidence in [specific area, e.g., managing complex medication regimens]. To address this, I've been actively reviewing drug guides, seeking opportunities to observe experienced nurses administering medications, and I'm committed to asking clarifying questions whenever I'm unsure. I'm also planning to pursue advanced certifications in pharmacology." This demonstrates proactivity and a growth mindset.

Assessing Clinical Acumen and Problem-Solving Skills

While theoretical knowledge is important, interviewers want to see how you apply it in real-world scenarios. These questions often involve hypothetical situations or discussions of your clinical experiences.

"Describe a challenging patient scenario you encountered during your clinical rotations. How did you handle it?"

This is a behavioral question that requires you to use the STAR method: Situation, Task, Action, and Result. Describe

the situation clearly, your role (task), the actions you took (which should highlight your critical thinking and nursing interventions), and the positive outcome or lesson learned. Focus on patient safety, communication, and your thought process. Even if the outcome wasn't perfect, emphasize what you learned and how you would approach it differently in the future. This is where demonstrating your learning agility is paramount.

"How do you prioritize your tasks when you have multiple patients with competing needs?"

This is a critical question for any nurse, especially new ones. Your answer should demonstrate an understanding of triage principles and patient acuity. Explain your approach to assessment, identifying urgent needs, and delegating when appropriate. Mention tools or frameworks you might use, such as ABCs (Airway, Breathing, Circulation) or Maslow's Hierarchy of Needs. "I would begin by conducting a rapid assessment of all my patients, identifying any immediate life threats. Then, I would prioritize based on who is most unstable or requires immediate intervention, followed by those with acute but stable conditions, and finally, routine care. I also understand the importance of clear communication with my team to ensure all needs are met effectively."

"What would you do if you suspected a colleague was not following proper procedure or seemed impaired?"

Patient safety is paramount. This question assesses your ethical compass and your understanding of professional responsibility. Your answer should demonstrate that you would address the situation promptly and professionally, prioritizing patient well-being. This often involves speaking directly to the colleague first (if appropriate and safe), then reporting your concerns to a supervisor or charge nurse. Highlight your understanding of the facility's policies on reporting and your commitment to patient advocacy. "My primary concern would be patient safety. I would discreetly approach the colleague to clarify the situation. If my concerns persisted or if the situation warranted immediate intervention, I would escalate my concerns to the charge nurse or my direct supervisor, following the facility's established reporting protocols."

"How do you stay up-to-date with current nursing practices and evidence-based research?"

This question assesses your commitment to lifelong learning. Mention specific resources you utilize, such as professional journals (e.g., AJN, Critical Care Nurse), online databases (e.g., PubMed), continuing education courses, professional organization memberships, and attending

conferences. For new nurses, highlighting your proactive approach to learning is key. "I am dedicated to continuous learning. During my studies, I regularly consulted resources like CINAHL and PubMed. I plan to actively engage with the nursing journals provided by [Facility Name], attend in-service education sessions, and I am eager to participate in any mentorship programs offered to gain practical insights."

"What are your thoughts on patient-centered care?"

This is a fundamental concept in modern nursing. Explain what patient-centered care means to you and how you would implement it. This includes respecting patient autonomy, involving patients in their care decisions, providing clear and understandable information, and treating patients with dignity and respect. Share examples of how you would foster a patient-centered environment, such as active listening and open-ended communication. "Patient-centered care means recognizing each patient as an individual with unique needs, preferences, and values. It involves active listening, empowering patients to make informed decisions about their care, and ensuring they feel heard and respected. I believe in collaborative care planning, where the patient is an integral part of the healthcare team."

Cultural Fit and Professional Growth

Beyond clinical skills, employers want to ensure you'll be a good fit for their team and their organizational culture. They are also invested in your potential for growth within their institution.

"How do you handle stress and pressure?"

Nursing is inherently a high-stress profession. Interviewers want to know you have healthy coping mechanisms. Share strategies like deep breathing exercises, mindfulness, seeking support from colleagues, maintaining a healthy work-life balance, and engaging in activities outside of work that help you de-stress. "I recognize that nursing can be demanding. When faced with pressure, I focus on staying organized and prioritizing tasks. I also find it beneficial to take short breaks to clear my head and to debrief with colleagues after challenging situations. Maintaining a consistent exercise routine and pursuing hobbies outside of work are also crucial for my overall well-being and resilience."

"How do you work as part of a team?"

Collaboration is essential in healthcare. Describe your experience working in teams, highlighting your ability to communicate effectively, support your colleagues, and

contribute positively to group goals. Mention specific instances where you demonstrated teamwork. "I thrive in team environments. I believe in open communication, mutual respect, and a willingness to support my colleagues. During clinical rotations, I actively participated in team huddles, offered assistance when needed, and valued the diverse perspectives of my peers and instructors. I understand that effective teamwork is vital for optimal patient outcomes."

"Where do you see yourself in 5 years?"

This question assesses your ambition and long-term career goals. Align your aspirations with the opportunities available at the facility. You might express a desire to specialize, gain certifications, take on leadership roles, or mentor new nurses. "In five years, I see myself as a competent and confident Registered Nurse, having developed expertise in [specific area]. I aspire to take on more responsibility, perhaps through advanced certifications or by contributing to unit committees. I am also interested in the possibility of precepting new nurses in the future, sharing the knowledge and skills I've gained."

"What questions do you have for us?"

This is your final opportunity to show engagement and initiative. Always have thoughtful questions prepared.

Asking about the orientation process, mentorship opportunities, continuing education support, team culture, or opportunities for professional development demonstrates your genuine interest. Avoid asking about salary or benefits at this stage unless it's brought up by the interviewer. Good questions might include: "Could you describe the typical orientation process for new graduates on this unit?" or "What opportunities are available for professional development and continuing education within the hospital?"

Preparing for Success: Beyond the Questions

Beyond meticulously preparing answers, remember these crucial elements:

1. **Research the Facility:** Understand their mission, values, patient population, and any recent news or achievements.
2. **Dress Professionally:** First impressions matter.
3. **Practice, Practice, Practice:** Rehearse your answers out loud.

No	Question	Answer
----	----------	--------

1	What are the most common 'behavioral' interview questions for new nurses, and how should I prepare for them?	Expect questions like 'Tell me about a time you had to deal with a difficult patient' or 'Describe a time you made a mistake.' Prepare by using the STAR method (Situation, Task, Action, Result) to construct concise, specific examples from your clinical experiences that highlight your problem-solving skills, empathy, and accountability.
2	How can a new graduate nurse effectively answer 'What are your weaknesses?' without sounding unqualified?	Choose a genuine weakness that you are actively working on improving. Frame it positively by discussing the steps you're taking to overcome it. For example, 'I'm still building my confidence in managing multiple complex patient needs simultaneously, so I actively seek opportunities to shadow experienced nurses and utilize unit resources to enhance my time management skills.'
3	What are some 'situational' interview questions new nurses should be ready for, and what's the best way to approach them?	These questions test your critical thinking, such as 'What would you do if a patient's vital signs suddenly declined?' Approach them by clearly outlining your immediate actions, prioritizing safety, mentioning escalation protocols (e.g., notifying the charge nurse or physician), and demonstrating your understanding of the nursing process.

4	How can I showcase my passion for nursing and my long-term career goals during an interview?	Research the facility and unit beforehand and tailor your answers to their mission and values. When asked about goals, express your desire to grow within the organization, mentioning areas of interest like specialized certifications, mentorship, or leadership roles. Show genuine enthusiasm for patient care and continuous learning.
5	What are the best questions a new nurse can ask the interviewer to demonstrate engagement and interest?	Ask questions that show you've done your research and are thinking about the role. Good examples include: 'What opportunities are there for professional development or continuing education on this unit?', 'What is the nurse-to-patient ratio typically like?', or 'What are the biggest challenges facing this unit right now?'
6	How should a new nurse address questions about their experience with specific technologies or electronic health records (EHRs)?	Be honest about your experience. If you have used specific EHRs, mention them. If not, emphasize your strong computer literacy and your ability to quickly learn new systems. Express eagerness to master the facility's specific EHR and ask about training provided.

7	What's the most effective way to demonstrate teamwork and communication skills in a new nurse interview?	Use examples from clinical rotations or group projects where you collaborated effectively with peers, instructors, or healthcare professionals. Highlight situations where you actively listened, shared information clearly, and contributed to a positive team dynamic to achieve a common goal.
8	How can a new nurse answer questions about dealing with stress or high-pressure situations?	Acknowledge that nursing is demanding. Discuss healthy coping mechanisms you utilize, such as debriefing with colleagues, utilizing stress-reduction techniques, or seeking support. Emphasize your ability to remain calm and focused under pressure, prioritizing patient safety and evidence-based practice.
9	What are common 'red flags' interviewers look for in new nurses, and how can I avoid them?	Red flags include a lack of preparation, negativity about previous experiences, an inability to provide specific examples, or a dismissive attitude towards constructive feedback. Avoid these by researching the facility, practicing your answers, being positive and professional, and demonstrating a genuine desire to learn and contribute.
