The first hurdle is often just getting into the system. Don't overthink it!

Logging In to EpicCare Ambulatory

Your organization will have provided you with specific login credentials. Typically, this involves a username and password. It's crucial to keep these confidential and follow your organization's policies regarding password security. You might also encounter multi-factor authentication (MFA), which adds an extra layer of security, such as a code sent to your phone or a biometric scan. Once you've successfully logged in, you'll be greeted by the EpicCare Ambulatory homepage.

Understanding the EpicCare Ambulatory Interface

The interface can seem a bit overwhelming at first, but it's designed for logical navigation. Let's break down some common elements you'll see:

Your Daily Workflow in EpicCare Ambulatory

As an ambulatory nurse, your day likely involves several core tasks. Let's explore how EpicCare Ambulatory supports them.

Finding and Accessing Patient Charts

This is probably your most frequent action.

- * **Patient Search:** The patient search function is your best friend. You can typically search by MRN, patient name, date of birth, or even partial

information. Accurate searching is vital to avoid accessing the wrong chart. Double-check the patient's name and DOB before proceeding. * **MyChart/Patient Portal Access:** You might also have access to view patient-submitted information from their MyChart account, providing valuable insights into their self-reported symptoms and concerns.

Managing Appointments and Schedules

Keeping track of patient appointments is crucial for a smooth clinic flow. * **Schedule View:** EpicCare Ambulatory usually provides a schedule view that displays your assigned patients for the day, including appointment times, provider, and reason for visit. * **Adding to Schedule:** If you're responsible for adding patients to the schedule, familiarize yourself with the process for selecting the correct appointment type, provider, and duration.

Pre-Visit Preparation and Documentation

Before the patient even arrives, you can often prepare. * **Reviewing Upcoming Appointments:** Take a moment to review your schedule for the day. Look for patients with specific needs or those who haven't had recent visits. * **Pre-Chart Review:** Accessing the patient's chart before the visit allows you to review their history, medications, and any outstanding orders or messages. This proactive approach can save time during the encounter. * **Gathering Supplies:** Based on the appointment type, you might be able to anticipate needed supplies or equipment and have them ready.

During the Patient Encounter: Efficient Charting

This is where EpicCare Ambulatory truly shines, but also where efficiency is paramount. * **Vital Signs Documentation:** You'll likely be responsible for taking and documenting vital signs. Look for the dedicated flowsheets or input screens. Ensure you're entering the correct units and time. * **Medication Reconciliation:** A critical nursing task. You'll be comparing the patient's current medications with their home medication list and making necessary adjustments or updates within the system. * **Entering Assessments and Progress Notes:** Whether it's a brief update or a detailed nursing assessment, learn how to utilize templates or free-text fields to document your findings. Many organizations utilize "smart phrases" or macros to quickly insert common phrases and sentences. * **Ordering and Managing Labs, Imaging, and Referrals:** You may be tasked with placing orders for diagnostic tests or referrals to specialists. Familiarize yourself with the order entry process, including selecting the correct order, specifying details, and ensuring all required fields are completed. * **Patient Education Documentation:** Documenting the education you provide to patients about their conditions, medications, or treatments is essential. Look for specific sections or fields dedicated to patient education. * **Utilizing SmartPhrases and Templates:** If your organization uses them, smart phrases (shortcuts for commonly used text) and templates can dramatically speed up your documentation. Learn the specific smart phrases available to you. * **"At Risk" Flags and Alerts:** Be mindful of any alerts or flags that appear in the patient's chart (e.g., fall risk, isolation precautions). These are crucial for patient safety and require specific interventions and documentation.

Post-Visit Tasks and Communication

Your work isn't done when the patient leaves the exam room. * **Completing Outstanding Orders:** Ensure all orders placed during the visit are finalized and sent to the appropriate departments. * **In-Basket Messaging:** This is your primary communication tool within EpicCare Ambulatory. You'll use it to communicate with physicians, other nurses, and support staff. Learn to prioritize and respond to messages promptly. This includes tasks assigned to you. * **Follow-up Instructions and Patient Portal Messaging:** If you're providing patients with follow-up instructions, ensure they are clearly documented in the chart and, if applicable, sent via secure messaging through the patient portal. * **Task Management:** EpicCare Ambulatory often includes a task list or in-basket that queues up tasks for you. Prioritize these tasks to ensure timely completion.

Key Features for Ambulatory Nurses

Let's highlight some specific functionalities that are particularly beneficial for ambulatory nursing.

As mentioned, the in-basket is vital. It's where you'll receive: * **Messages from Physicians:** Orders, clarifications, and requests. * **Messages from Other Staff:** Consults, information sharing, and task assignments. * **Tasks:** Items requiring your action, such as reviewing results, calling patients, or preparing for a specific visit. * **Tips for Effective In-Basket Use:** * **Check it regularly:** Don't let messages pile up. * **Prioritize:** Address urgent messages first. * **Respond promptly:** Aim for a timely response to all messages. * **Use templates:** Many in-basket responses can be standardized. * **Delegate when appropriate:** If a task can be handled by someone else, delegate it.

Flowsheets for Efficient Data Entry

Flowsheets are designed for easy entry of repetitive data, like vital signs, intake and output, and pain assessments. They often present data in a grid format, allowing you to quickly document over a period of time.

SmartPhrases and Templates: Your Documentation Accelerators

These are lifesavers for busy nurses. * **SmartPhrases:** Predefined text snippets that can be inserted with a short command. For example, typing ".vitals" might expand to "Vital signs were within normal limits." * **Templates:** Pre-structured note formats that guide your documentation for specific types of encounters or assessments. * **Finding and Using Them:** Your organization's EpicCare trainers will likely provide a list of available smart phrases and templates. Spend time learning and practicing with them.

Order Entry and Management

Accurately placing and managing orders is critical for patient safety. * **Navigating Order

1	What's the absolute fastest way to get up and running with EpicCare Ambulatory for a new nurse?	Focus on the core workflows: patient registration, charting visits (SOAP notes), medication management, and order entry. Utilize the built-in 'Quick Start' or 'Learning Curve' modules within EpicCare itself for hands-on practice.

2	I'm feeling overwhelmed by all the EpicCare Ambulatory features. What are the 'must-know' sections for a quick start?	Prioritize the patient's chart (demographics, problem list, medications, allergies), the encounter/visit section for documentation, and the order entry module. These are the fundamental areas you'll interact with most frequently.
3	Are there any specific tips for efficient charting in EpicCare Ambulatory from day one?	Learn to use templates and smart phrases to reduce typing. Familiarize yourself with copy-forward functionality for routine entries and pay attention to mandatory fields to avoid errors and delays.
4	What's the best approach to understanding patient flow and scheduling within EpicCare Ambulatory for a quick start?	Understand how appointments appear in the schedule, how to check patients in and out, and how to navigate between the schedule and the patient's chart. This will streamline your daily operations.
5	How can I quickly find the most relevant patient information when I have limited time?	Utilize the 'flowsheets' or 'summary' tabs within the patient chart, which often consolidate key data like vital signs, recent lab results, and active problems. Familiarize yourself with the patient banner for immediate key identifiers.
6	Where can I find help or quick answers if I get stuck using EpicCare Ambulatory?	EpicCare Ambulatory usually has built-in help functions and context-sensitive guides. Your facility's IT department or a designated Epic 'super user' are also excellent resources for immediate assistance.
7	What are some common pitfalls new users should be aware of to avoid slowing down their workflow in EpicCare Ambulatory?	Avoid creating duplicate patient records, double-check orders before signing, and be mindful of patient privacy by logging out when away from your workstation. Practicing these habits early saves time and prevents issues.
