The CU2655 error code typically indicates a problem with the communication between the Carrier unit's indoor and outdoor components. This malfunction prevents the system from operating correctly, resulting in a lack of heating or cooling. The precise cause can range from simple wiring issues to more complex problems within the control board or sensor malfunctions. The error might manifest as a complete system shutdown, inconsistent performance, or unusual noises. Effective troubleshooting requires a systematic approach, starting with the most accessible checks and progressing to more complex diagnostics. A thorough understanding of your HVAC system's architecture and components is also beneficial. The following sections will provide detailed insight into potential problem areas and suggested solutions.

Possible Causes of CU2655 Error Code

The CU2655 error can stem from several sources:

- **Faulty Wiring:** Loose, damaged, or incorrectly connected wiring between the indoor and outdoor units is a common culprit. A visual inspection of all wiring connections, both at the units and within the wiring conduits, is crucial. Look for corrosion, frayed wires, or loose terminals.
- **Communication Board Issues:** The communication board acts as the central nervous system for the HVAC system. Malfunctions within this board can disrupt communication between the indoor and outdoor units, leading to the CU2655 error. This often requires professional diagnosis and potentially board replacement.
- **Sensor Problems:** Several sensors monitor various parameters within the system. A faulty sensor, such as the ambient temperature sensor, evaporator temperature sensor, or pressure sensor, can send incorrect data, triggering the CU2655 error. Replacing a malfunctioning sensor is often a relatively straightforward repair.
- **Control Board Malfunction:** The main control board governs the entire system's operation. A faulty control board can cause a variety of errors, including CU2655. Repair or replacement is usually required.
- **Refrigerant Leaks:** While less directly linked, significant refrigerant leaks can indirectly trigger this error code due to the system's

inability to operate correctly under low refrigerant levels. Refrigerant leaks require professional attention and repair.

Troubleshooting Steps for CU2655

Before calling a professional, try these steps:

- Power Cycle the System:** Turn off the power to both the indoor and outdoor units at the breaker box. Wait for about 5 minutes, then turn the power back on. This simple step often resolves minor communication glitches.
- Check Wiring Connections:** Carefully examine all wiring connections, looking for loose wires, corrosion, or damage. Tighten any loose connections and replace damaged wires.
